

The BSB 'the Blue Sky Broadcaster'

The BSB 'the Blue Sky Broadcaster'

The BSB is a new step in the Orgonite broadcasting, of the entirety of the Orgonite arsenal I personally have not seen anything that gave so much positive results.

The concept is simple: broadcast the Orgonite energy into the electrical grid complex

How: take any Orgonite device and wrap an electric cord around it 7 or more times

Plug the cord into a electric socket and in the other end plug in a night light, salt lamp, Christmas light, etc... or any appliances .

From the report that we are getting from the field it appear that the grid is becoming in it self an Orgon generator, and that the "death" towers are now broadcasting Orgon energy.

It is now possible and recommended that your 'gifting' be done from your living room, not much need to address impossible locations when you can go to the utmost hidden and remote secret places by energizing the grid.

Another step is to wrap your computer cables; this will travel to another grid, possibly world wide (WWW) 😊

And at last you also can wrap your telephone cable as well and that will go to again another grid.

By doing all of this you are just about guarantying yourself a blue sky 😊
j

Re: The BSB 'the Blue Sky Broadcaster'

Hi, as a newbie to all this, I'm having a bit of a difficulty visualizing the "electrical cord" connections. Pics would help. If I go to Radio Shack, for example, what do I ask for? How effective is the BSB by itself? And is that gold foil on the surface? It seems a bit of a shame to hide the beauty of the piece with your every day cord. Any ideas on ways to keep the aesthetics while powering up?

Also, I read on WM that orgone tends to attract insects, true? I get roaches, ants, etc. and am already probably self-poisoning myself with pesticides. But I don't want to have to wrap orgonite then connect it to one of those outdoor insect killing zappers, the vibes would seem a bit conflicted, if you know what I mean. 😊

[nepenthe](#)

Hello Nepenthe

If you go to [viewtopic.php?f=2&t=4](#) you will see many options for making the BSB, and you are correct, we are hiding a beautiful creation every time we wrap a cord around it, but we are making a trade for heavenly looking clouds 😊😊, and beside you can make two, one for the BSB and the other one to look upon 😊, also you can just as well wrap the cord without the

salt water, I thought the salt water help, but the inconvenience is not worth it for me anymore, it works well without.

As far as insects, that is the further thing from the truth, I had a delightful cat (passed in my arms last year 🐾), and for about four years before that there was not one flea on her, and my present beast (the nicest pit bul you'll ever seen) have zero flea, both spend their time outside in the grass and in the woods, as well as no ticks, I have never used any chemical products on them what so ever

Now to get rid of unwanted insects, it is easy and not toxic, what you must get is Diatomaceous Earth, is not toxic (I take some everyday) and will eliminate all of your pest (children and spouses not included) 😊.

The broadcasting is a good thing, the best for getting beautiful clouds 😊

josh

josh wrote: Now to get rid of unwanted insects, it is easy and not toxic, what you must get is Diatomaceous Earth, is not toxic (I take some everyday) and will eliminate all of your pest

Josh, I've never heard of this ... until now 😊 Have done some reading and am now about to order some. I have a silverfish (earwig) population here that I've looked for a natural solution to, and had read that Diatomaceous Earth in the form of kitty litter worked. From the info in your post, it tweaked my curiosity, and I'm surprised (pleasantly 😊) at not just how effective it is, but how versatile, and even necessary for good health!

thank you for the info! 😊

Dear,

I first appreciate the magnanimity of Josh for revealing his pillow secret.

May God bless Josh for this divine act. My sincere gratitude to Josh.

I am searching for sea weed to make Josh pillow in Dubai.

I am new to orgonite, in the learning process before making the first one.

request certain clarifications.

1) The DOR to OR conversion rate

a) is directly proportional to the current flowing through the cable wound

above the HHG or TB? or only a simple power supply cord with an indicator bulb will do?

b) is limited by the capacity of the HHG? ie, if the HHG is bigger then the conversion rate is bigger?

or this is limited to the area of the power generator supply lines?

2) HHG made with only superfine metals(XHD)and 4cm length crystals, will this perform better due to the EMR from the wrap around cable? I have superfine iron powder with me now and trying to get copper powder.

Thanks in advance,

Best Regards

G'day Gifters..... Greetings from Australia

.Thought I'd share my experiences so far.

My first Broadcaster was a mini induction CB. wrapped with H'duty extension lead ,placed in salt water in a lidded bucket. It ran a digital clock and sometimes a pedistal fan 24 / 7.

I noticed a strong , but pleasant orgone field instantly, I later replaced the CB with a purpose

built very large cone. This was double dipped in resin to prevent salt water corrosion, which affected the previous CB.

On the way to work, I stopped into the local shop and into an orgone paradise. The staff and customers were glowing and happy for first thing in the morning ! !

The shop has several upright fridges, couple of freezers, walk in coolroom, satellite Tv ,etc. An electromagnetic radiation nightmare. Had already gifted Hhg and Tb which gave it a pleasant atmosphere.

.....But this was very different....I think I walked out glowing too !

I drove along the country road ,dotted with 20 acre blocks and lined with regular powerlines. I swear I could feel the orgone field all the way.

That was about 7 weeks ago.

Read post about toroidal shape Broadcaster, <doughnut shape> , so made three....one for Bluegum,

and one each for Darwin and Palmerston.

Maybe Bluegum could post a picture.

So a bit about two weeks ago both were installed.

Continued...

The Darwin one Ok. The lady in Palmerston had to reset hers outside. It was too strong inside so it runs 24/7 in an enclosed verandah.....cool.

After a visit I noticed the whole area very positive. The people in large shopping centre seemed

to be happy....many smiling...very unusual !

At this time of year , one month away from the shortest day the Top End should be in the middle of the dry season.....a beautiful time of the year....Cool nights ,30+* C during the day....camping, fishing and NO rain. We had 1 week of dry season.....THEN,,,

At the same time Broadcasters deployed , weather starts streaming across the continent, from NW <Indonesia> through to east coast, dropping rain here and there...some really heavy esp.

in Darwin and further south, Gregory National Park was closed due to flooding. Also to east coast !

Trouble is high humidity and temperatures have been the Pits...revolting . Everyone's hanging out for the dry . Looking forward to using a blanket again. Ha....Looks like dry weather

back next week...High pressure system moving in...Hooray !

Jeans and jumper instead of just jocks !....Thanks Josh....Broadcasters...Techniques that work ! ! !

Mine is still hooked up since earlier this spring. It was made by Josh. I am running the refrigerator, the cat's water fountain dish (always on), and my nano shield when it is not on batteries being carried around. Still plugging away, it is. I really, really notice a difference in the skies the past few months. I thought it was just going to be temporary but naw, they spray, it goes away! I'll post pics soon and will try to recall my initial impressions of when I first installed it.

Here are the promised pictures. They were once on another forum but removed and I don't know why. This is an incredibly powerful device.

....
Ok, how do you include pictures in the posts for this forum? I used the codes but it didn't do anything....?????

update! Cool, thanks Josh and admin, I'll post those pics now!

Just an unassuming bucket

Aha! But no ordinary bucket!

Splitter setup

I will try to recall my first experiences with it. I am really disappointed that my initial report from earlier this spring was removed without explanation on WM, actually the entire topic was removed.

Let me preface this with explaining the device is like a huge HHG that is set up to backfeed orgone energy through the electric grid essentially gifting anyone who is on the same electric company.

The device itself is about a 5-10 lb piece of orgonite made with the usual ingredients with added herkimer diamonds, iron oxide and the typical HHG crystal layout. (It has been hooked up for a few months now so I can't recall exactly what it weighs). There is a large gauge, heavy duty extension cord (waterproof contractor grade), coiled tightly around the large orgonite cone. This is all set down inside a bucket. Both ends of the extension cord reach outside of the bucket, and the male plug end connected to a standard wall outlet. The other end is just above the rim of the bucket. For convenience sake, the lid of the bucket was included but with two holes cut for both ends of the extension cord to poke out. Redmond red earth salt was included to make a saline water solution enough to almost cover the orgonite. The top of the orgonite cone sticks up out of the water a bit. I put the device in my kitchen so

I could plug the refrigerator into it since it runs frequently at a higher wattage than a nightlight. I tried to decide between a low wattage device that was always on or a higher wattage device that ran intermittently and the second option won out. I hooked up a multi-way splitter to the end of the extension cord and plugged in a few other devices as well including a water fountain that always runs, and an orgonite device with mobius coil that is powered by a 15 hz frequency generator. I figured with these devices running just about constantly, it would provide plenty of backfeed opportunity to see results.

I notified several of my friends who lived in town and only one was able to feel a difference. Easter Sunday this year was the first full day it was hooked up, I believe. (will repost the feedback from my friend). The weather was in the process of becoming spring so the other people could not decide if the improved mood, the cheerfulness, the sense of relief and well being was due to winter changing to spring or something else. So if you can imagine cold, dreariness, changing to warm brightness, well, that is what happened. I was totally on cloud nine for several days which is always what happens when I first bring new powerful orgonite devices into my home. I was running around crazy all amped up like I was high on speed or something. In my hyperdrive state of operating, I seemed to have a lot of self made disasters, spill, accidental mishaps, etc, and normally that stuff makes me just want to give up and go sit down and take a nap but during that first week, nothing, and I mean nothing seemed to phase my high. You wouldn't even believe how much stuff I was able to get done during that time.

I also noticed around that general time frame that spraying was not occurring as frequently as before. When I finally did notice spraying, it seemed like it was gone within a very short time. It is still like that even two months later, or has it been 3 months? There is a part of town that gets sprayed very heavy all the time and it still happens but it just doesn't stay around. I wouldn't recognize a slyph if one sat down on top of me but what happens is the chems start to dissipate and some huge and awesome cirrus looking cloud formations start to occur.

The resident dowser (now banned with no explanation) on the previous forum where this info was posted dowsed that the ambient energy of my region had been increased by 30-40% since the device was hooked up. I don't remember how large of a radius he said, though. The same person installed similar devices of his own in his region and experienced radical changes in the energy levels in his city. (I hope he will repost the info here soon) 😊😄
[nepipemi](#)

My Broadcaster is still working beautifully after two months. Nice to see you all here!

Peace
Steve

Hi Steve! Nice to see you 😊
[nepipemi](#)

EXCELLENT Nepi.,
love your photos.....again.....built my first broadcaster based on these photos.
Easily made clear.....and what an outstanding device to help EVERYONE !!

I seem to be in a constant state of excitement these days...ho hum....so much so that I think I'm going to get totally

PLASTERED.....

this weekend....can hardly wait..Ha ha

Thought I'd include my donut Grid Buster pics for your pleasure and for those interested in how it was put together.

The only problem with a closed mind...

...is that you only learn the truth after you've become a victim of it.

Hooked my CB to the grid after dowsing that it would serve better that way. Saw amazing blue skies, beautiful cumulous clouds, and some much needed rain today. Sylphs appeared

over our house after hooking up the CB to the grid. 😊

Blessings
Steve

[Re: Broadcaster on the Electricity Grid](#)

by [nepipemi](#) » Sun Jun 13, 2010 8:11 am

Wow, I never imagined that a CB would be better utilized. Steve dowsed my CB at a pretty average bovis level so maybe I'd be wise to consider the same thing. I am still trying to figure out a method to dowse bovis. 🙄 Where is Indigo Wolf when you need him? (only because he was a newbie that learned really fast, just keen on discovering his method).

Is that silicone lubricant in your photos the same stuff used for a belt dressing?

This plaster orgonite reminds of an art project I did in high school. We molded plaster into a milk carton then carved the block of plaster into shapes. I made a hand giving the peace sign. Man, how cool would that have been to have crystals and stones embedded into that hand!

[nepipemi](#)

Hi Nepi... The silicone lube is for metal , rubber,,not leather ...don't bother to even use it on small pieces. Glass and silicone moulds. for Tb's and Hhg,s
Just wanted to be sure that big plaster came out.

@ Steve....great work....great photos and info, CB broadcaster must pack some punch.

This is good, I believe I am going to do the same with a Cloud Booster I have in the mountain, It did good for a little while, may be 30 to 40 days, but not much more, no mater how big I made my CB the Chemsoup came back.
Actually I have so much hooked up to the grid now, it may be best to give this CB for another location for broadcasting

Thank you Steve, this is taking a large step toward more blue sky 😊

j

[josh](#)

Day three with the CB hooked up to the grid. Feels and looks like "hyper-reality" to me.

Blessings
Steve
Attachments

Oh, not that kind of belt, like an alternator belt in a car. We have some belt dressing and I think it is silicone. I've never had any luck with lubricants.

Nepi, I use to have problems with lubricants until I spoke to Mark at US composite, very pleasant person, he advise me to get some car wax and wax the mold that I was going to use and then put lubricant on it, ever since I have had no problem, for pieces with a bad attitude, I let them cool and put them in the freezer over night.

These pictures of the cloud nation have been an every day event here with us for over two month, ever since we started the Broadcasting, so if your clouds are like these please post so we can see and rejoice, if not, make a broadcaster, resin or plaster and you will have blue sky

This is the table center piece

Josh

Wow! Now those are some luscious clouds Josh! Good work!

Hey Bluegum,

that is an awesome looking device. What did you use for a mold?

What were your initial impressions of the ambient energy levels after installing it?

blessings,
Nepi

Hello Bluegum

Since broadcasting have you noticed more blue sky and magnificent clouds, over here it made such a difference, they still spray, but it is a joke anymore, it is gone in a short time, and since we are broadcasting the whole grid giving so much life to the clouds, it could be, it just could be....that the whole chem soup is changing into a wonderful fertilizer for nature, I don't know how to prove this, but if we are reversing the spin of the soup it will become a good thing at best and a neutral compound at worst , so we are doing good regardless 😊😊

Guess I'm spoilt, We see those healthy cumulus and cumulonimbus storm clouds all the time in the "build up" and wet seasons all the time. Good to see you've got them too ! The lightning shows here, are amazing...sometimes scary !
What a pleasant surprise to see you on OrganizeAustralia, Josh and Nepi...Thankyou
Today unexpected call out to my favourite school...last week of term ,. We made more plaster organite !...senior class
took a junior class...instructed and made..very efficient..I just sat back...ha ha . Another lot of homes gifted. !

Broadcaster questions,

I've recently seen many broadcaster models lately, both big and small, that don't use the bucket of salt water.

The 3 broadcasters operating in Darwin, Palmerston and rural <at my place > all operate on the salt water model.

I believe they changed our seasonal weather for a couple of weeks...rain in dry season..very abnormal..new records !

1. So how necessary is the bucket of salt water..how does it work ?.....induction ?

2. How important is the mass of broadcaster ? Will all sizes work equally ?

I note this concept is not a new one. ref ..hooten. Coiling a cord around matrix looks alot safer !

My plaster broadcaster should be up and running in a week....still damp,

Can a large resin broadcaster work effciently without water ?.... I think people would trial it more readily, less mucking around.

Interested in the mechanics..theory.. to help promote concept...ha ha ..I know it works , already...just trying to clarify my thinking...Thanks

Gosh MG you are right those clouds look almost scary, I must say that I have never seen clouds with that much presence and life..... it look like they are saying : "now you try to mess with me and see what happen". 😄😄

At the same time that I was introducing the Broadcaster on WM I also was trying to change to name of the CBs to that of a CLOUD BOOSTER, and the change might have created a new paradigm for the entire cloud nation, this was the idea of my lady Catherine.

As far as the salt water; I like it I think it work and I have been using it for many years, but you are totally correct about the 'mucking' there are folks that use the broadcaster without salt water with excellent results, and at this time I am telling everyone to do it dry, just make a few more coils around.

On the old forum, I remember this Hooten gent, thats a long time ago, before 2005 🙄, You know I am quite certain that someone somewhere has though of doing this broadcasting idea, the important thing is that we do it since it appear to be working better than anything so far. This past three weeks I have been doing this double broadcasting : on a long extension cord, wrap a small devise near the male side, make sure you have 10 or 15 feet of free wire and then wrap another small devise, if the cord is long enough, you can do another 10 feet of free wire and install another devise, so this is what you will have, (now for this idea I use small Orgonite such as the pendant I sent you)

10 feet (3 or 4 meter) 10 feet (3or4 meter)

**Male.....device.....device.....device...
.....female
side side**

Just passing the wire across the device will not do near enough, wrapping is necessary Here I have so many devices wrapped up: big, small, Orgonite, plasterite, it would be difficult to say , this or that

is working best 😄😄

Now I am giving devices to people to put in their home, I even buy the extension cord for them, lot easier than going to find all of the nefarious places all over the country side
josh

MG I think we may see the light at the end of the tunnel, and this time I dont think it is a train

think we may see the light at the end of the tunnel, and this time I dont think it is a train

yeah, it's more like a one eyed monkey on a motorcycle with a clown wig.

Ok, I'll shut up now, couldn't resist.

My 'BC' has been hooked up since April of this year. Here are some pics I took 2 days ago.
They are trying their damndest to steal my blue sky.

See the pretty normal clouds with the crud above them.

That day, I decided it was time to pour another BC. The next day, no crud! 😊😊

[nepipemi](#)

Nepi , good work, have you noticed that even with their hard try at "whiting out" the clouds are there, before they would spray and nothing was there to stop them, and now the clouds are making those trails go away quickly 😊😊
